

Jeian Jasper S. Obelidor

Cloud / DevOps Engineer | Quezon City, Philippines | 09272530395 | obelidor.jeianjasper@gmail.com

linkedin.com/in/jeianjasper/ | github.com/jeianjaz | jeianjasper.me

TECHNICAL SKILLS

Languages: Python, SQL, Bash, Java, HTML/CSS

Cloud & Infrastructure: AWS (EC2, S3, VPC, IAM, RDS, Lambda, CloudFront, ALB, ASG, CloudWatch), Terraform, Azure

DevOps & Observability: Docker, Kubernetes, Helm, GitHub Actions, Jenkins, Git, Linux, Prometheus, Grafana, AlertManager, Ansible, Trivy

WORK EXPERIENCE

IT Intern - United Laboratories Inc. (UNILAB) | Sept 2025 - Feb 2026 *Mandaluyong City, Philippines*

- Migrated 3,000+ physical vehicle records into a centralized cloud database, making the fleet operations fully paperless.
- Validated and tagged 2,200+ records during a new Vehicle Management Application launch, ensuring data was accurate so the system went live with no downtime.
- Performed systematic data quality checks across the migration dataset to support the transition to a digital records system.

PROJECTS

CloudDeck — Self-Deploying Portfolio on AWS

jeianjasper.me

- Provisioned 7 AWS services via 11 **Terraform** files, deploying a serverless site with zero console clicks on every git push.
- Developed a 4-stage **GitHub Actions CI/CD pipeline** to automate deployment security checks using **Checkov scan**, **Terraform validate**, and **S3 sync**.
- Built a live dashboard using Lambda and the Cost Explorer API, running at \$0 per month under AWS Free Tier.

AutoTier — Self-Healing 3-Tier Infrastructure on AWS

- Architected a **3-tier stack** with ALB, EC2 Auto Scaling, and RDS Multi-AZ across 2 Availability Zones using 18 Terraform files.
- Automated EC2 **self-healing** using CloudWatch alarms, SNS, and Lambda, achieving an **80-second Mean Time To Recovery (MTTR)**.
- Wrote a Python script for fault injection testing that terminates random ASG instances to validate system reliability and automated alerting.

DockerLens — Observable Containers with Prometheus and Grafana

- Containerized a Flask app with a multi-stage Dockerfile, non-root user, and health checks, plus a service Compose observability stack.
- Instrumented **RED-method** metrics with 3 alert rules for error rate, P95 latency, and app availability, routed through AlertManager.
- Deployed to **Kubernetes** using a **Helm chart** configured with **Horizontal Pod Autoscaling (HPA)** for dynamic traffic handling.

EDUCATION & CERTIFICATIONS

Quezon City University - Bachelor of Science in Information Technology | Aug 2022 - June 2026

- Latin Honors: **Cum Laude (GWA: 1.30)**
- **AWS Cloud Practitioner Essentials** – Amazon Web Services (Official Certificate) | 2026
- **Introduction to Cybersecurity** – Cisco Networking Academy (Credly Verified)
- **Advanced Software Engineering Simulation** – Walmart Global Tech / Forage
- **Introduction to Cloud** – Datacom / Forage
